

Maintenance & Care Instructions for Tufflex Deck Coatings Systems

Every time you vacuum or sweep your interior floors you "should" look at your deck! Water is good!!! Chemicals are bad!

No simple green, 30 second cleaner, bleach or spic & span

Use approximately 20 drops of Joy or Dawn dish soap in 4 gallons of warm water... scrub with a soft bristle boat brush...rinse with lots of clean cool water. Your deck needs this every single month (minimum!)

If you get a greasy gooey sticky substance on deck that will not come off with soap and water use goof off and very quickly wipe away with wet soapy rag...do not leave goof off on the deck surface to evaporate...this will damage the surface.

Do not pressure wash your deck...you could cut into the surface.

No high heels! No sharps on deck! No potted plants directly on deck surface. Move plants a few inches each time you water as not to stain deck surface. Always have plastic or rubber feet on all deck furniture.

If you are in doubt or need help please call or email Dan
